

```
import phonenumbers
import streamlit as st
from inputnumber import number

from phonenumbers import geocoder
ch_nmber = phonenumbers.parse(number, "CH")
print(geocoder.description_for_number(ch_nmber, "en"))

from phonenumbers import carrier
service_nmber = phonenumbers.parse(number, "RO")
print(carrier.name_for_number(service_nmber, "en"))
```

this is out of the code, create a file with name number and type this:
number = "country code + number"
example;
 number = "+19456XXXX67"
and save
